Teflon coating

Silicone coating

Material:

Aluminum alloy

Aluminized steel

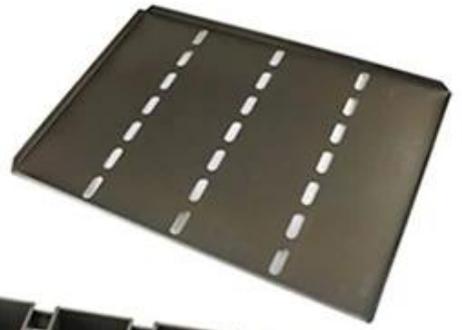

Aluminum alloy is a lightweight, durable material that is commonly used for baking pans and trays. It is often coated with a non-stick material like Teflon or silicone to prevent food from sticking.

Aluminized steel is a type of steel that has been coated with a thin layer of aluminum. This coating provides excellent resistance to corrosion and oxidation, making it a popular choice for baking pans and trays. The aluminum coating also helps to prevent food from sticking to the surface.
