Corrugated metal roofing panels

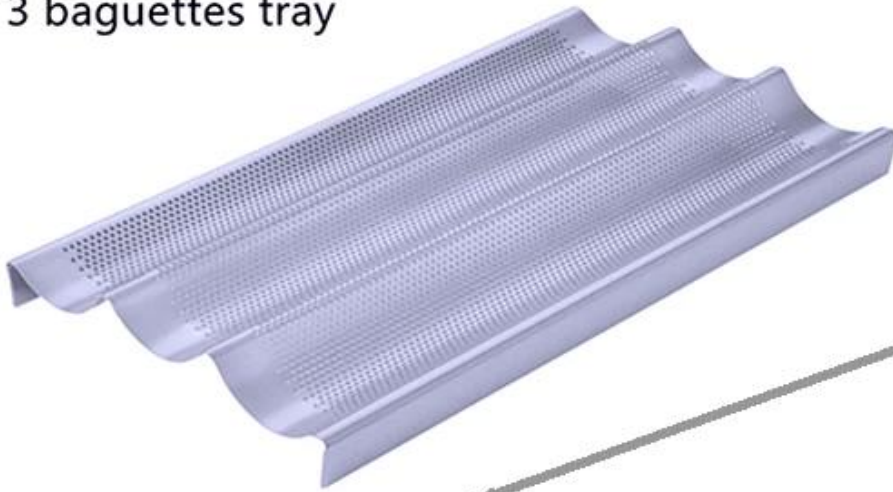

Corrugated metal roofing panels are made from galvanized steel or aluminum. They are available in a variety of colors and finishes. The panels are made from a single sheet of metal that is rolled into a series of waves. This creates a strong, durable surface that can withstand harsh weather conditions. The panels are typically used for residential and commercial roofing. They are also used for industrial applications, such as for the roofs of warehouses and factories. The panels are easy to install and maintain. They are also a cost-effective roofing option. For more information, please contact Tsingbuy.

With a few specifications we can manufacture your customized product

- A. Overall Length
- B. Overall Width
- C. Height
- D. Row Width
- F. Width of edge
