Multi-mould Pan is a versatile kitchen tool used for baking and cooking. It is designed with multiple compartments, each shaped like a specific food item, allowing for efficient and uniform cooking. The pan is typically made of metal, often with a non-stick coating, and is used in a variety of applications, from baking bread and pastries to cooking meat and vegetables. The compartments are usually arranged in a grid pattern, making it easy to cook multiple items at once. The pan is also known for its durability and ease of use, making it a popular choice for home cooks and professional chefs alike.
