Corrugated metal roofing is a popular choice for residential and commercial buildings due to its durability and low maintenance.

Corrugated metal roofing is made from a variety of materials, including steel, aluminum, and copper. The most common material is steel, which is coated with a protective layer of zinc or aluminum to prevent rust. The panels are formed into a series of ridges and valleys, which helps to shed water and snow. The panels are typically installed over a wooden or metal deck. The panels are available in a variety of colors, including silver, red, and blue. The panels are also available in a variety of profiles, including ribbed, scalloped, and standing seam. The panels are typically installed in a row, with the ridges facing up. The panels are held in place by screws or bolts. The panels are a long-lasting and reliable roofing option.

With a few specifications we can manufacture your customized product

- A. Overall Length
- B. Overall Width
- C. Height
- D. Row Width
- F. Width of edge
