Multi-mould Pan is a versatile kitchen tool used for baking various types of breads and pastries. It is designed with multiple compartments, each shaped like a small mold, allowing for the simultaneous preparation of many individual items. The pan is typically made of metal, often with a non-stick coating, and is used in a variety of cuisines. The image shows three different stages of use: the first shows the pan filled with small, round, golden-brown pastries; the second shows the pan filled with long, narrow, golden-brown pastries; and the third shows the pan filled with large, round, white bread rolls.
